

Sprint Retrospective Meeting Minutes

Attendees: Christopher Kverne, Nathan Lioe-A-Tjam, Isabella Anthony

Start time: 03/29/26 6:35pm

End time: 03/29/26 6:55pm

Snapshot of the recent sprint that was done.

- Task Status
 - Completed: 6
 - Carried over: 0

Reflection of the last sprint.

- Christopher
 - What went well: Finalized local noise proof showing the geodesic deviation strictly increases under noise which is a novel theorem. Benchmarked DFS-QNG on a wide range of VQA structures showing high stability and performance increases.
 - Things to improve: Writing needs a lot more work and polish for neurIPS. Paper needs to be shortened. Some more experiments on other benchmarks are also needed.
- Nathan
 - What went well: Made great progress in the project. Besides that we communicated well. Moreover, we were able to show our theories with some experiments.
 - Things to improve: Plan out for some errors that may occur during testing and start working on final deliverable.
- Isabella
 - What went well: Throughout the 5th sprint we had made great progress overall. The group did a good job at communicating the experiments and tasks that needed to be completed. Through this it was possible to move forward and get good results for the projects. On top of that, I have completed my tasks in a timely manner. I wrote under the 'experiments' section on the paper which was a nice accomplishment and pushed new code to the github repository.
 - Things to improve: For the sixth sprint, I will start planning on how we can deliver our project for the showcase further.

Tasks pending from previous retrospect:

- None

Tasks that were rejected and assigned to a future sprint. What are things that need to be done for the next sprint?

- None

Task/Action	How do we know if it's done
-------------	-----------------------------

-None	-None
