

Sprint Retrospective Meeting Minutes

Attendees: Christopher Kverne, Nathan Lioe-A-Tjam, Isabella Anthony

Start time: 04/12/26 6:35pm

End time: 04/12/26 6:55pm

Snapshot of the recent sprint that was done.

- Task Status
 - Completed: 4
 - Carried over: 0

Reflection of the last sprint.

- Christopher
 - What went well: Ran a large amount of experiments with DFS-QNG and compared it to EGT-QNG and first order methods showing high performance. Finished structure of the paper and most proofs.
 - Things to improve: Writing needs refinement and more citations. Comparisons to first order methods are still missing but can be executed in a single day.
- Nathan
 - What went well: Made good progress with the project and completed many different experiments. We were able to communicate well and finish our poster in a timely manner.
 - Things to improve: Plan for extra time that experiments take as they can take a very long time and potentially crash during execution.
- Isabella
 - What went well: During the 6th sprint we had made great progress overall in our project. The group did a good job at communicating the experiments and tasks that needed to be completed. We were able to finish most of the experiments and prepared everything needed for the showcase. On top of that, I have completed my tasks in a timely manner. I helped on the paper which was a great accomplishment and pushed new code to the github repository as well.
 - Things to improve: For the seventh sprint, I will make sure I finish the benchmark we are missing and schedule time blocks in my day to finish this asap..

Tasks pending from previous retrospect:

- None

Tasks that were rejected and assigned to a future sprint. What are things that need to be done for the next sprint?

- None

Task/Action	How do we know if it's done
-None	-None
