

Sprint Review Meeting Minutes

Attendees: Stefany Castro , Alyaa Mossa, Chelsea Ross, Fernando Mata, Ogabek Rakhimov

Start time: 6:50 PM

End time: 7:41 PM

After a show and tell presentation, the implementation of the following user stories were accepted by the product owners: All.

- **#1 Feature: Log In / Security**
 - As the doctor, I would like to safely get into my account without feeling unsure that my information will be exploited or shared. I want to know that my patients' information is safe under my account.
- **#2 Feature: Patient portal / Lab results (history)**
 - As the doctor, I would like to have a complete log and history regarding the patient, so that I can clearly and easily see and detect any trends in the patients condition
- **#3 Feature: Graphs and Analytics (compare past and present results)**
 - As the doctor, I would like to have to see my patients results in graphical and analytical form so that I am able to distinguish what lab results lowered or elevated. This is to bring awareness and on what to control.

The following ones were rejected and moved back to the product backlog to be assigned to a future sprint at a future Spring Planning meeting.

- **#4 Feature: Chat Box**
 - a) As the doctor, I would like to have quick, easy, and accessible chat discussions with my patient to discuss anything from daily checkups to questions pertaining to their condition.

This feature will be added further into the sprint as we want to focus only on the internal part of the software. The features that were accepted are connected to our data insights and users entry as a start. Therefore as product owner, we will leave the chat box feature added further into the sprint until we have a better implementation to the feature.
