

Simple Installation Guide

Requirements:

- Node.js 18 or newer
- npm (usually bundled with Node.js)
- Any terminal or IDE

Install and build:

1. Open a terminal or IDE in the project root.
2. Install project dependencies: Type "npm install" within the terminal
3. Build the extension: "npm run build"

After the build finishes, the packaged extension files will be in the dist folder.

Load in Chrome:

1. Open Chrome, click the settings icon > Extensions > Manage extensions.
2. Turn on Developer mode if not already enabled.
3. Click Load unpacked.
4. Select the dist folder.
