

Goal

This project aims to develop an application that helps manage the lost and found operations at FIU. The Application will help to connect the lost and found staff on campus with users from any place where they have an internet connection. Users can check if their items are in any of the locations and claim them making it more efficient to recover your lost items. The Campus Lost and Found is a webapp so it can be accessed directly through browsers and we also created a specialized mobile app that allows user to access the lost and found easily.

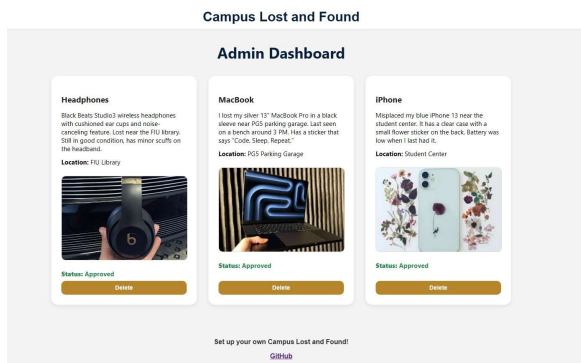

Features

- User-Friendly Reporting
- Real-Time Search & Matching
- Secure Claim Verification
- Mobile Integration
- Admin and user interfaces
- Registration of lost items
- Display for lost items

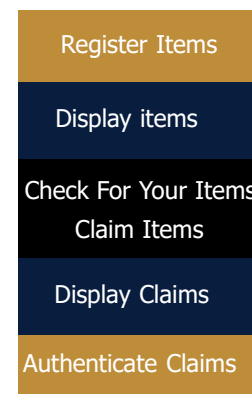

User Interface

Admin Interface

■ User ■ Staff ■ App
