

Sprint Retrospective Meeting Minutes

Attendees: Ryan Blanco, Chris Medina, Nicholas Llontop, Roy Molina

Start time: 1:00PM

End time: 2:00PM

What Went Right:

We were able to start researching the usage of ElevenLabs and Phonely to prepare for the implementation of new APIs in the product. The implementation of ElevenLabs has already been completed and is currently in the testing phase to straighten out any bugs that may be present within the product. The capabilities of Phonely are now clear and we are ready to proceed with the implementation.

What Went Wrong:

The shift in project use cases has left us a bit behind schedule but we have been able to advance in our research to get back on schedule. The Phonely AI has a limited amount of minutes available as a free trial and really limits the amount of testing we are able to perform as we would need to pay around \$50 if we use up our free trial.

Team Performance:

The team's performance has been great. Everyone is working hard on making the project come to life in a way that satisfies the needs of the Product Owner.

Product Quality:

The product is currently in a solid state as we were able to implement the ElevenLabs API and are currently testing it. It also seems like the Phonely API will be able to be implemented smoothly.
