

Sprint Planning Meeting Minutes:

Attendees: Ryan Blanco, Chris Medina, Nicholas Llontop, Roy Molina

Start time: 3:00PM

End time: 4:00PM

After discussion, the velocity of the team was estimated to be 3 hours of working on the project each day with working together as a group for at least an hour and a half each day.

The product owner chose the following user stories to be done during the next sprint. They are ordered based on their priority.

- New Use Case 1: AI Voiceover
 - The program must be able to use text-to-speech in order to implement a voiceover of the chatbot's responses in order to allow a more seamless interaction between the user and the chatbot.
- New Use Case 2: Voice Recognition
 - The program must have a feature where a user can use their voice to ask the chatbot questions. The voice then gets processed and turned into words that is then fed to the chatbot in order to receive a response.
- New Use Case 3: Phone Implementation
 - The program sends the user a phone number where they can call and speak to the AI about the uploaded lease document.
- User Story 1: "I wish there was a way to interact with a chatbot using my voice in order to speed up the process of asking questions."
 - Task 1: Implement a button on the Streamlit UI that allows the user to speak into their microphone and ask the chatbot a question.
- User Story 2: "I wish the chatbot could read out its responses to me, so I could hear its input while working on other things."
 - Task 2: Integrate ElevenLabs into the code to allow the AI chatbot to speak to the user by reading out their responses.

The team members indicated their willingness to work on the following user stories.

- Ryan Blanco
 - Use Case 1
- Chris Medina
 - Use Case 3
- Nicholas Llontop

- Use Case 3
- Roy Molina
 - Use Case 2
