Fall 2024 Senior Design Project

Cherry Clothing

Students: Andres Benitez, Stefano Quiroga, Francesco Senese, Fabio Fernandez
Instructor/Faculty: Masoud Sadjadi, Florida International University

INTRODUCTION

Cherry Clothing is an e-commerce website that offers a variety of products such as shirts, hoodies, and pants available to order.

The website provides different features to their users such as seeing their order history, tracking their current orders, and placing new orders. And users can contact us directly to answer any questions they may have.

IMPLEMENTATION

The website utilizes a Microsoft SQL Server database, which allows us to store different types of data for users, such as products, orders, user information. The website uses PHP to process all the user's requests to the database and send the processes the information to be displayed for the user.

Other technologies used to create the website were, XAMPP and GitHub, which are used to host the website, and to share all files within the development team.

ACKNOWLEDGEMENT

The material presented in this poster is based upon the work supported by Florida International University. We'll thank Pedro Ojeda for his assistance and mentorship that we received throughout the senior design project.

SYSTEM DESIGN

The website was designed using a variety of programming languages such as HTML, for the structure of the page, CSS for the styling, and JavaScript for some functionality. These 3 programming languages allowed us to create a website that is user-friendly and practical for experienced and non-experienced users.
