

Shortcomings / Wishlist

The following features were desired for version 1.0 but implemented partially or not at all:

- As a STARS admin, I would like a tutor to be automatically added to a Microsoft Teams channel when they are approved to tutor it.
- As a STARS admin, I would like the App to make it easy for me to update the Student Registration Form when I initially set or change what courses are available for tutoring.
 - Since it is not possible for a Form to draw dynamic content, the App should show a screen reminding the user what new courses have just been added and what courses have been removed.
 - A link to the Microsoft Form should be provided for the user to edit the choices.
- As a STARS admin, I would like it to be easy to add new courses for tutoring to the current ongoing semester.
- As a STARS Admin, I would like the App to generate and present some statistics about the semester when I “end” the semester.
- As a STARS admin, I would like channels to be automatically archived at the end of the semester and no longer active.
 - This feature is not available in Power Automate currently.
