

Project Name: BackLogger

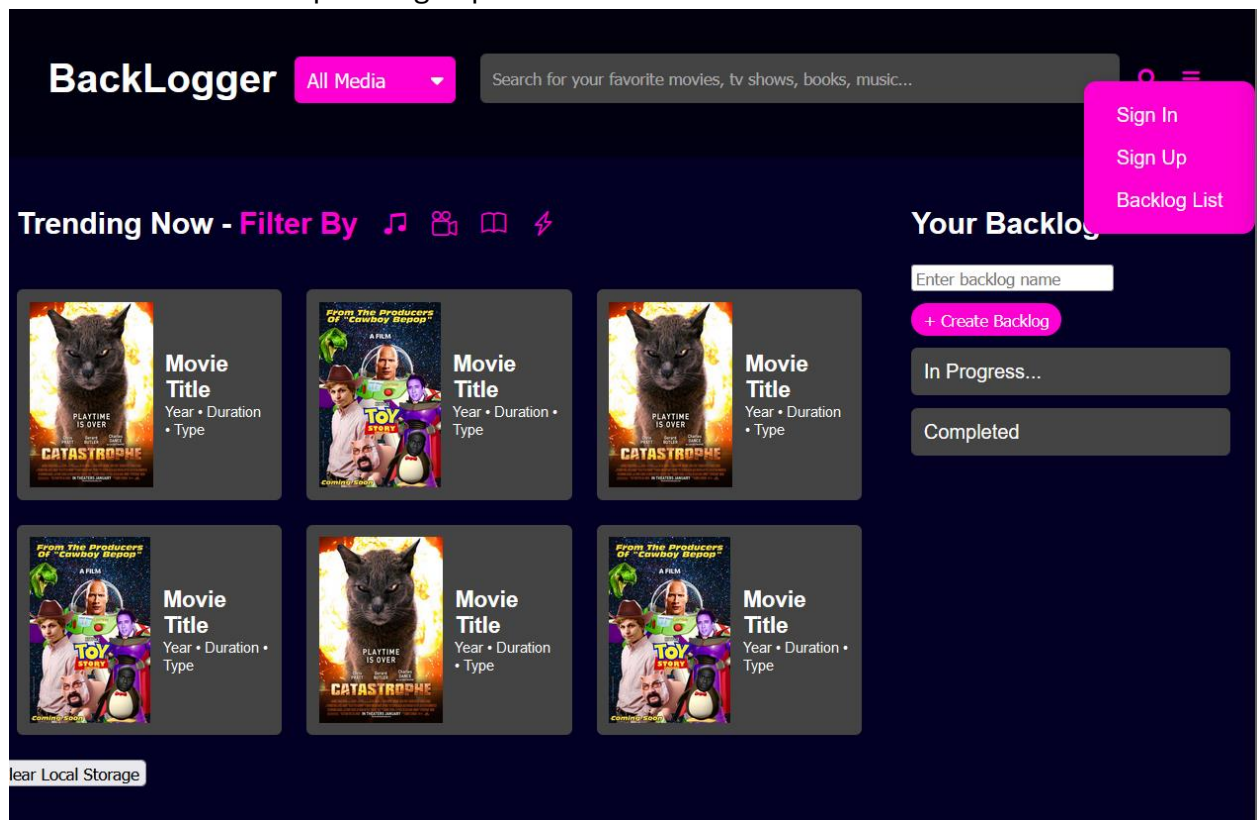

Members: Fernando Collante, Lorena Miranda, Brandon Torrens, Luis Venegas, Andres Vazquez

User Manual created by Brandon Torrens

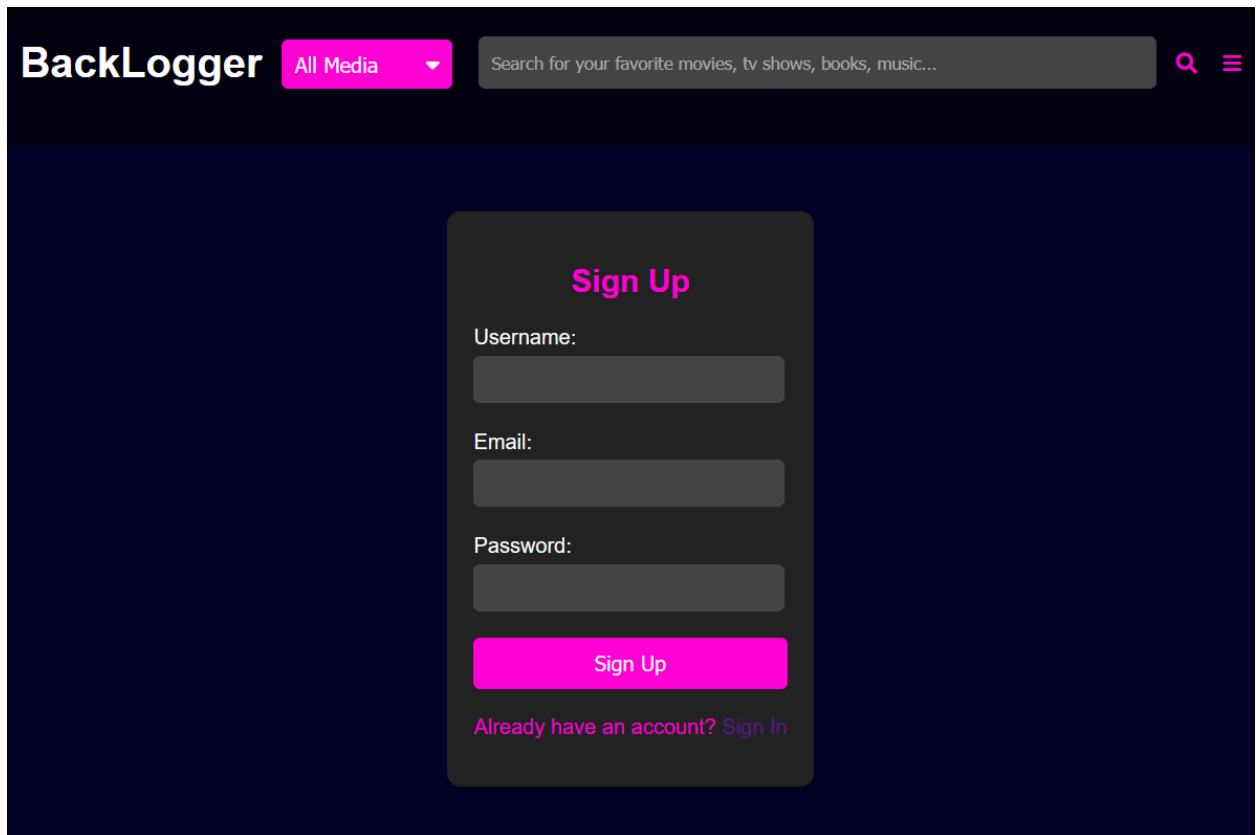

This user manual is intended to show the user how to explore and use the website. PLEASE NOTE this project is not finished and it is intended to be updated as future students improve the project and continue to add more functionality to the web application.

The following demonstrations show off what is currently working when the node server is running and connecting to it locally on the same network.

- User Creation
 - To create a new user, you need to click on the three bars on the top right and select the option sign up.

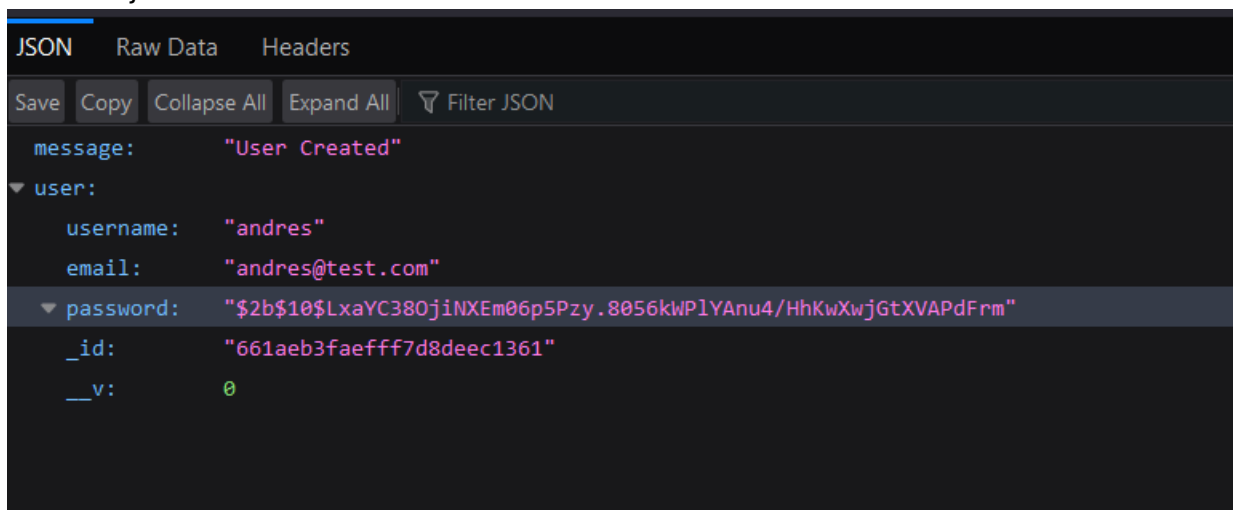

- Then you need input new username email and password. Then click sign up!

The image shows the 'Sign Up' form on the BackLogger website. The form is centered on a dark blue background. It has a title 'Sign Up' in red. Below the title are three input fields: 'Username:', 'Email:', and 'Password:'. Each field is a dark gray rectangle. Below the password field is a red 'Sign Up' button. At the bottom of the form, there is a link that says 'Already have an account? Sign In'.

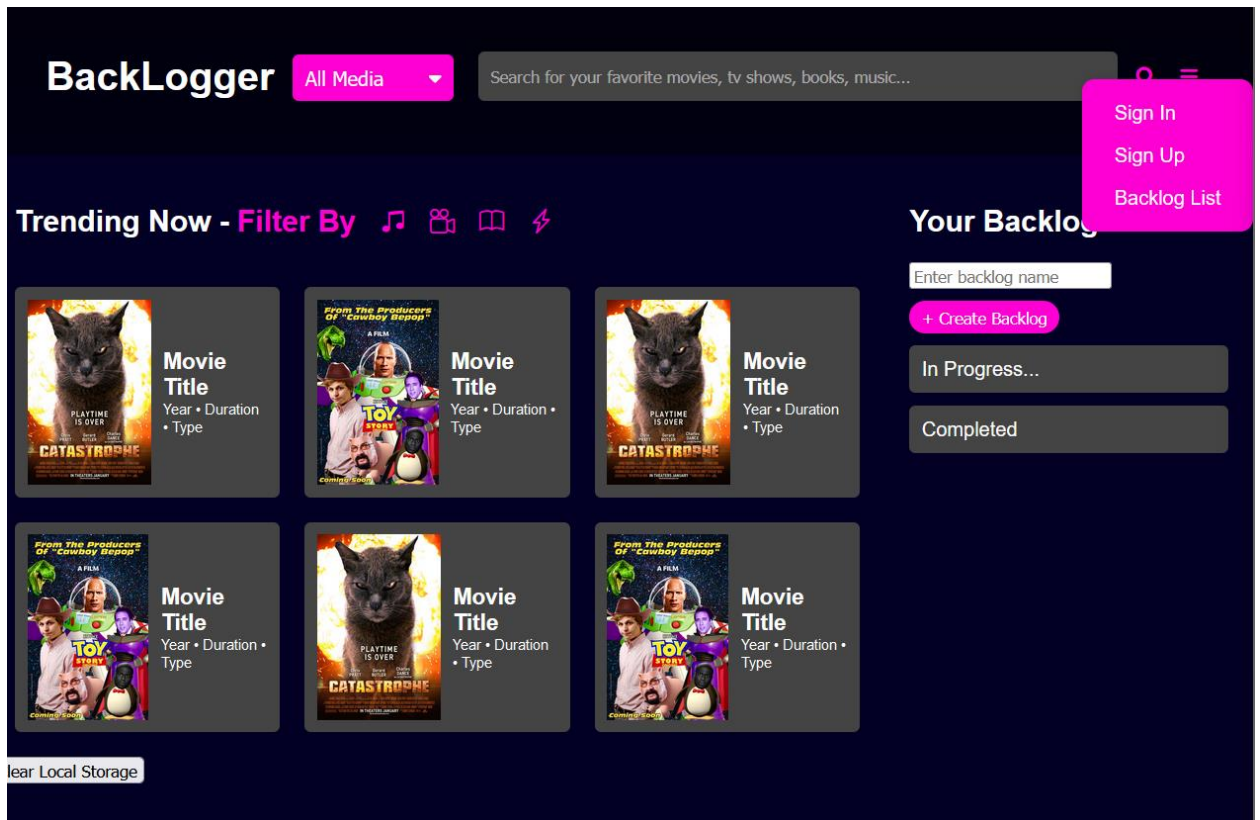

- Then you'll receive a positive api response of the user being created or rejected.

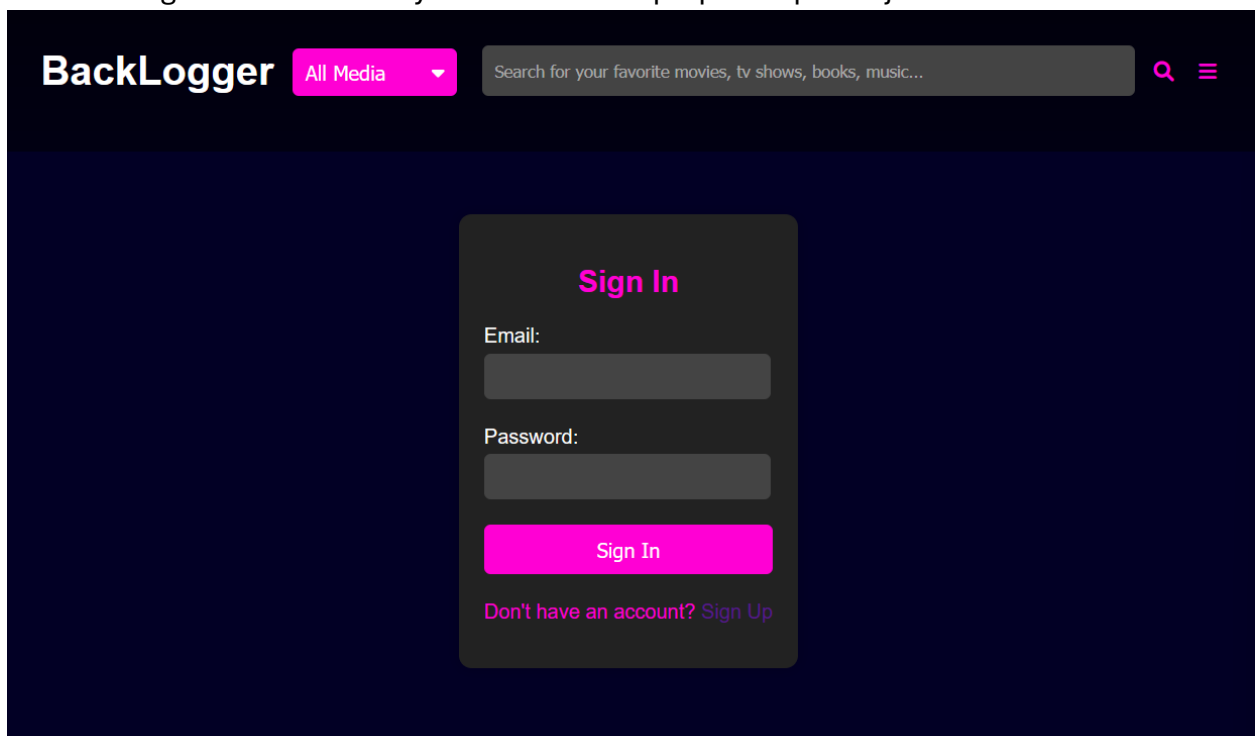

The image is a screenshot of a JSON response in a web browser's developer console. The JSON is expanded, showing the following structure:

```
{  "message": "User Created",  "user": {    "username": "andres",    "email": "andres@test.com",    "password": "$2b$10$LxaYC380jiNXEm06p5Pzy.8056kWpLYAnu4/HhKwXwjGtXVAPdFrm",    "_id": "661aeb3faefff7d8deec1361",    "__v": 0  }}
```

- User Sign on
 - To sign in with a user, you need to select the three bars in the top right, and then select sign in.

- Then you'll be presented with the sign in page, simply input valid credentials to sign in. If it not valid you will receive a proper response json.

- When signed in successfully you'll be presented with the user profile configuration page.

- User Cookie validation
 - When you sign in there will be a cookie that gets created and validated as you navigate pages to validate you are still signed in with the proper user. If this cookie is deleted for any reason, the user gets signed out. The item called “token” is the cookie in this example.

Name	Value	Domain	Path	Expires / Max-Age	Size	HttpOnly
connect.sid	s%3A7-mFTSH...	10.0.0.136	/	Session	91	true
token	eyJhbGciOiJIUzI...	10.0.0.136	/	Session	158	true

- When the user cookie gets deleted, the verification will detect that and properly disconnect you.

```
JSON  Raw Data  Headers
Save Copy Collapse All Expand All Filter JSON
message: "Unauthorized"
```

- Home page filtering
 - You are able to perform some filtering in the home page and list pages by selecting different icons for different event mediums.
