

Shortcomings & Wishlist

- Map Integration
 - Integrate a map library (e.g., Google Maps) into the app.
 - Display event locations with customizable pins.
 - Implementing clustering for nearby events on the map.
 - Providing directions from the user's location to events.
 - Calculating and displaying the distance between the user and events.
- Profile Page
 - Complete profile UI
- Editing and deleting events
 - Users can modify or completely remove their events.
- Comment System
 - Comment section under events.
 - User authentication for leaving comments.
 - Reply and report comments.
- Rating system
 - Rate different events.
- Multiple pictures uploading
 - User can put more than one picture for an event.
 - Pictures are added to the database instead of being stored locally.
