

<Web Chain>

Students: <Alec Joseph>

Mentor: <Alec Joseph>, <Affiliation>

Instructor: Dr. Masoud Sadjadi, Florida International University

Problem

Do you have a friend or a group of colleagues that want to meet up to do a project ? However , do to time constraints can't be available for that project or meetings to get some work done ? In addition, do you want a way to make voting easier but not show your privacy as well as keep some type of anonymity? This application will help eliminate time constraints and allow for planning to be easier.

Current System

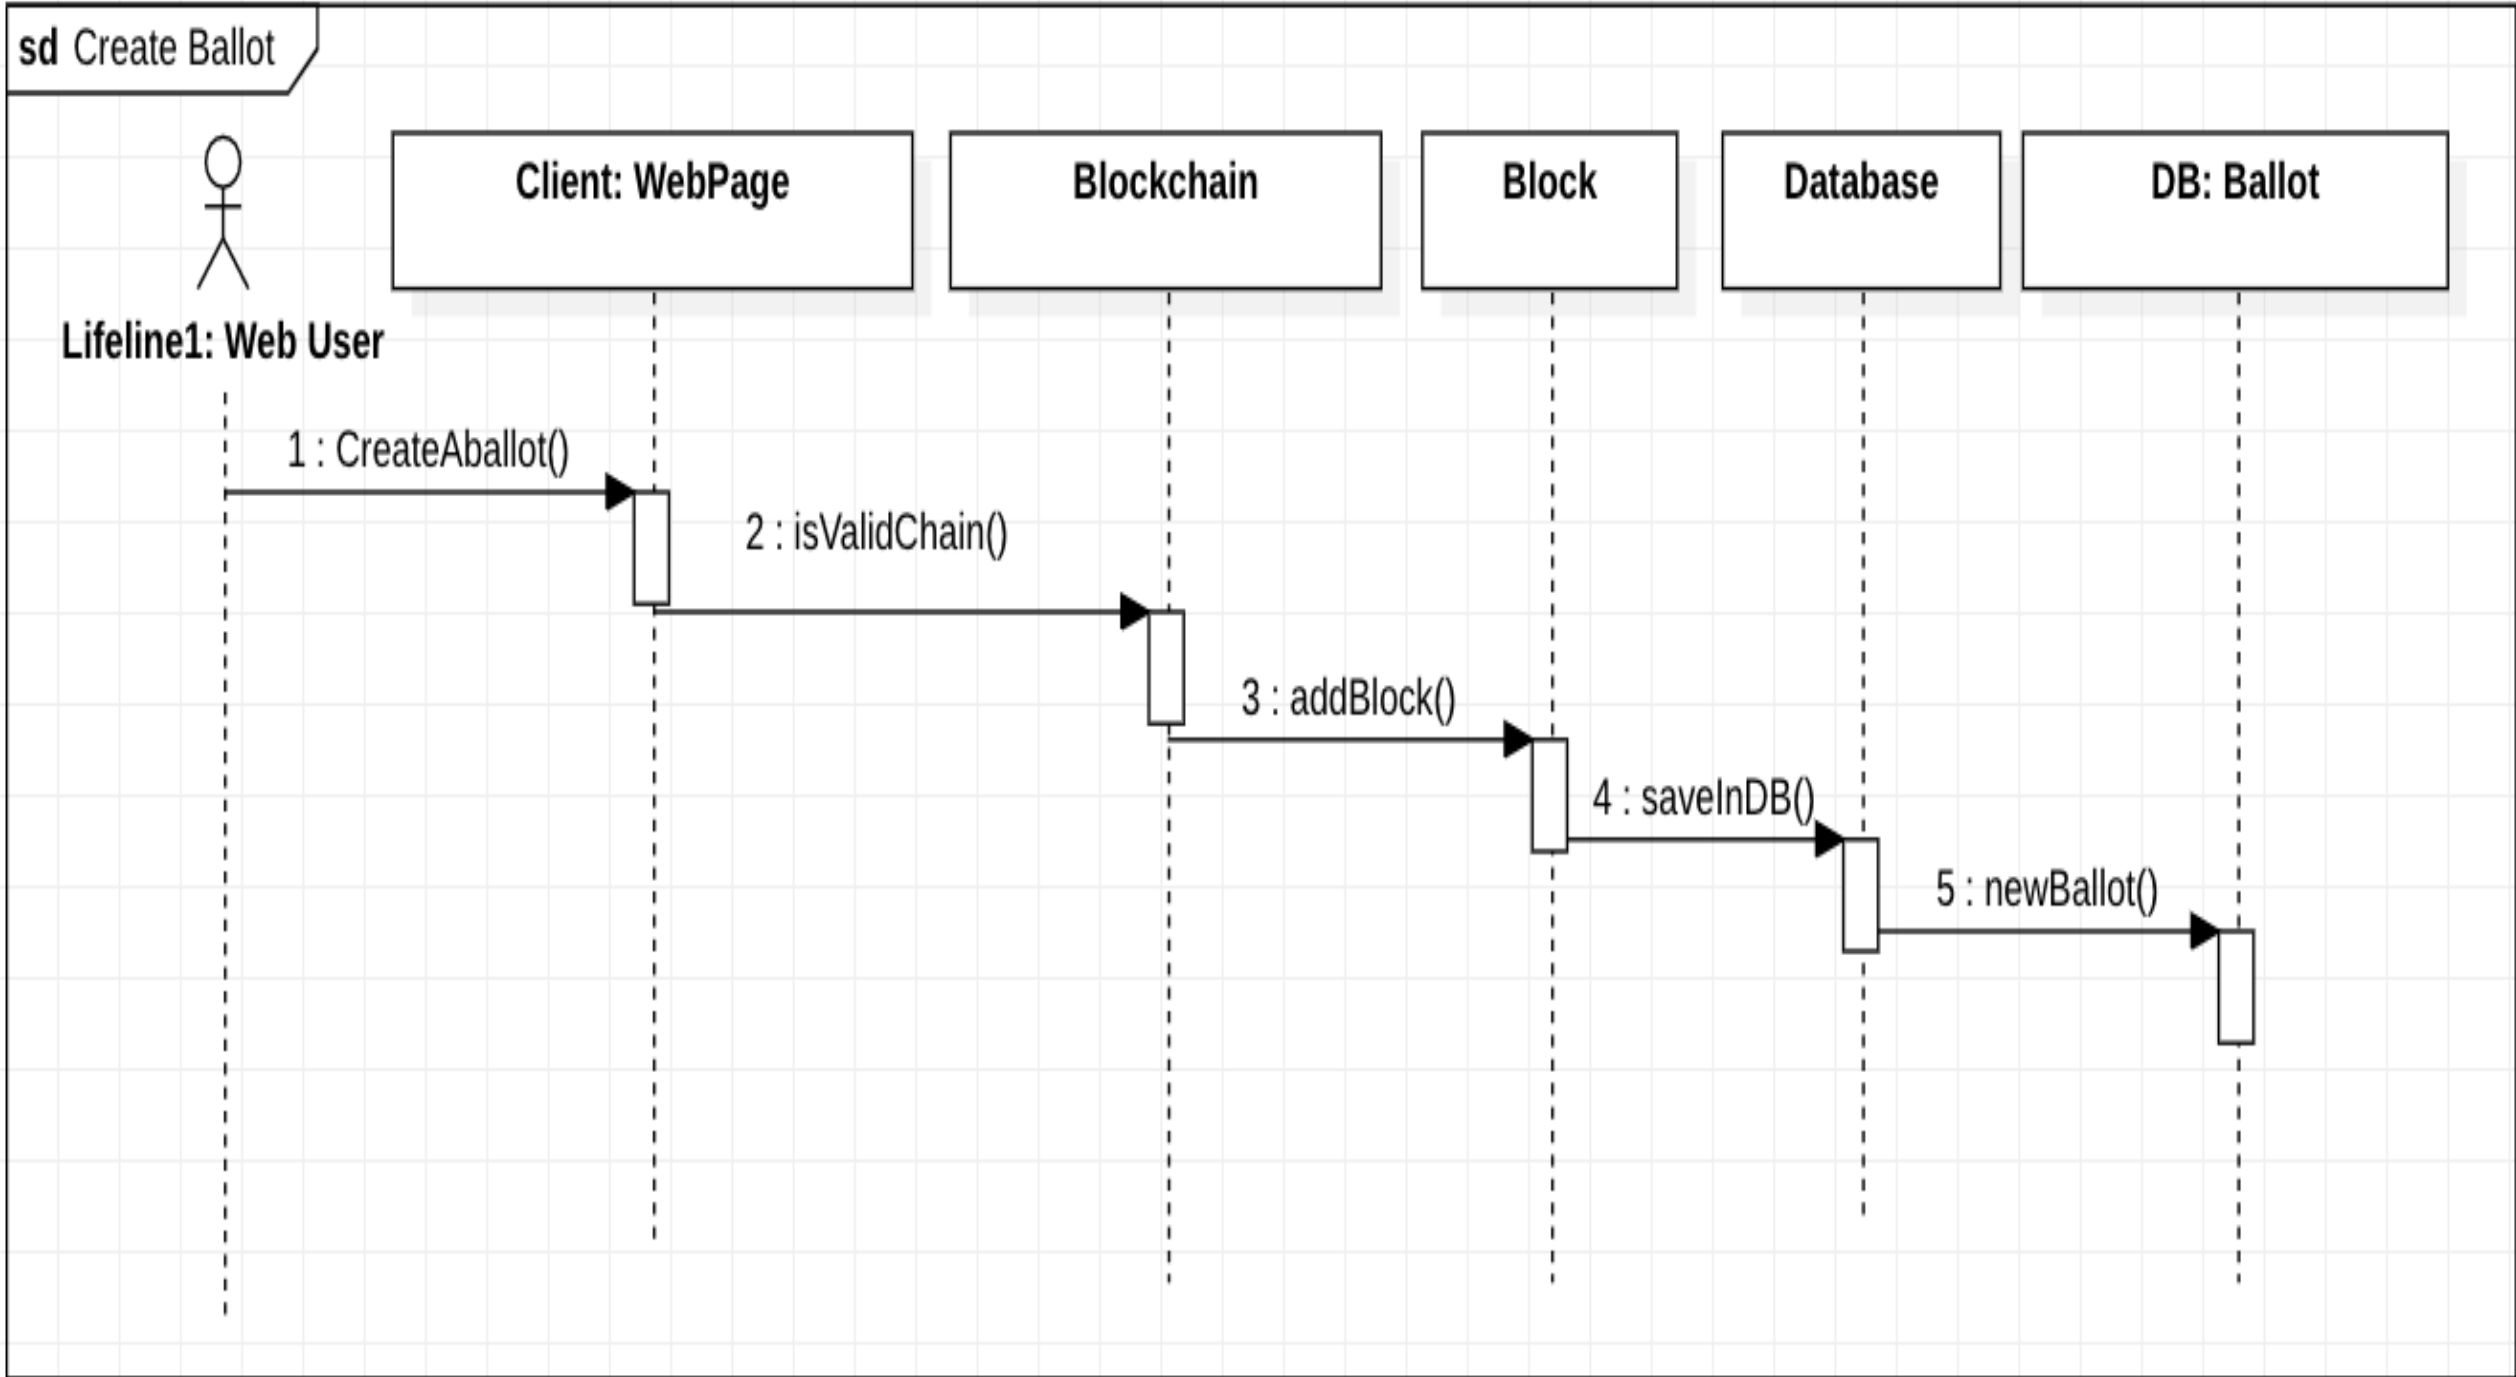

I was responsible for the designed for front-end version of this application. This application needs to be created for the user to participate in the poll and allow for colleagues and students to create, design and make polls. The poll system is to allow them to determined how to create decision from the result of the poll.

Requirements

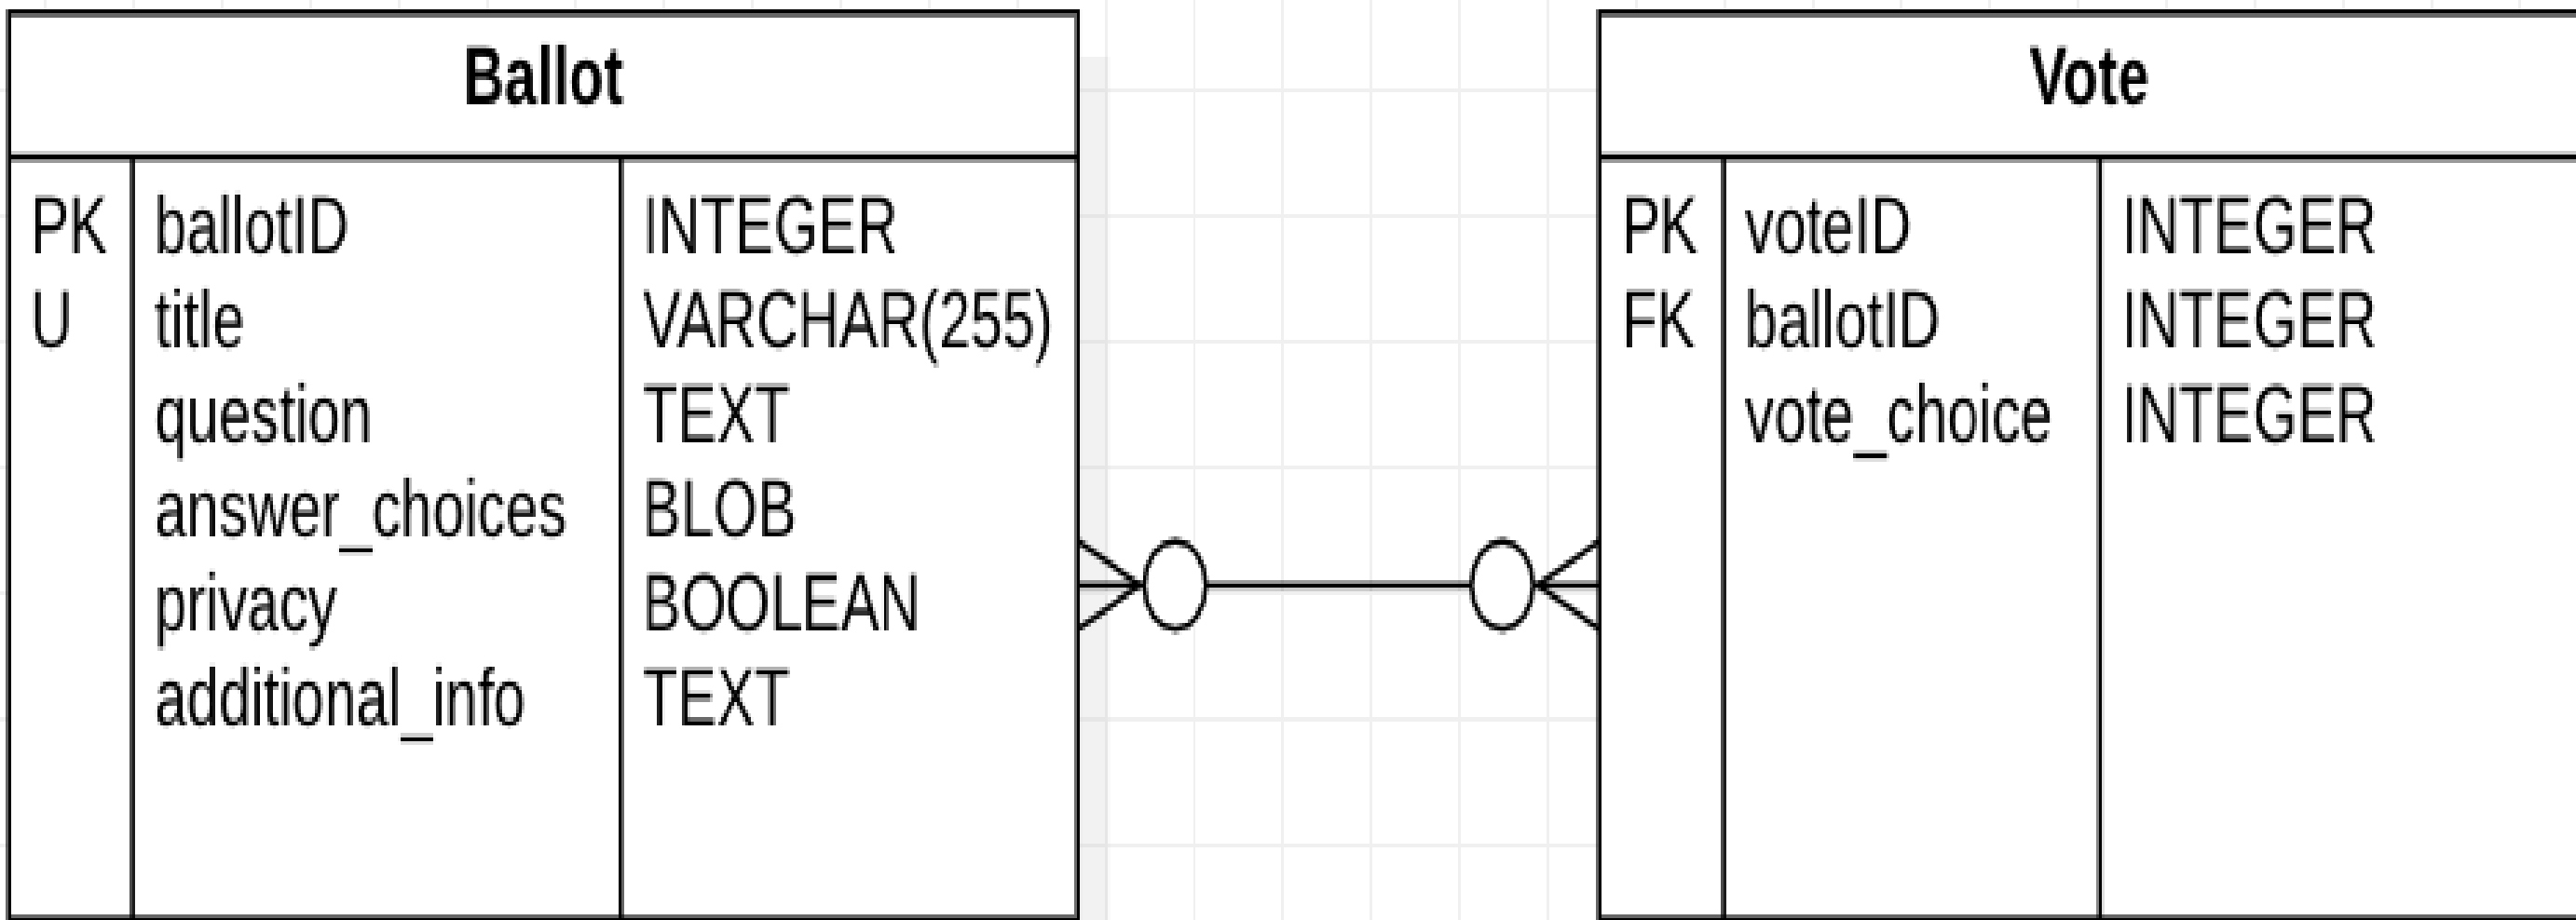

The requirements we're to be good at JavaScript and to know react well. If you know to create in html and CSS that's useful for the project as well as application development.

In addition, knows some JavaScript and the require language to dedicate for the project for backend and frontend connection.

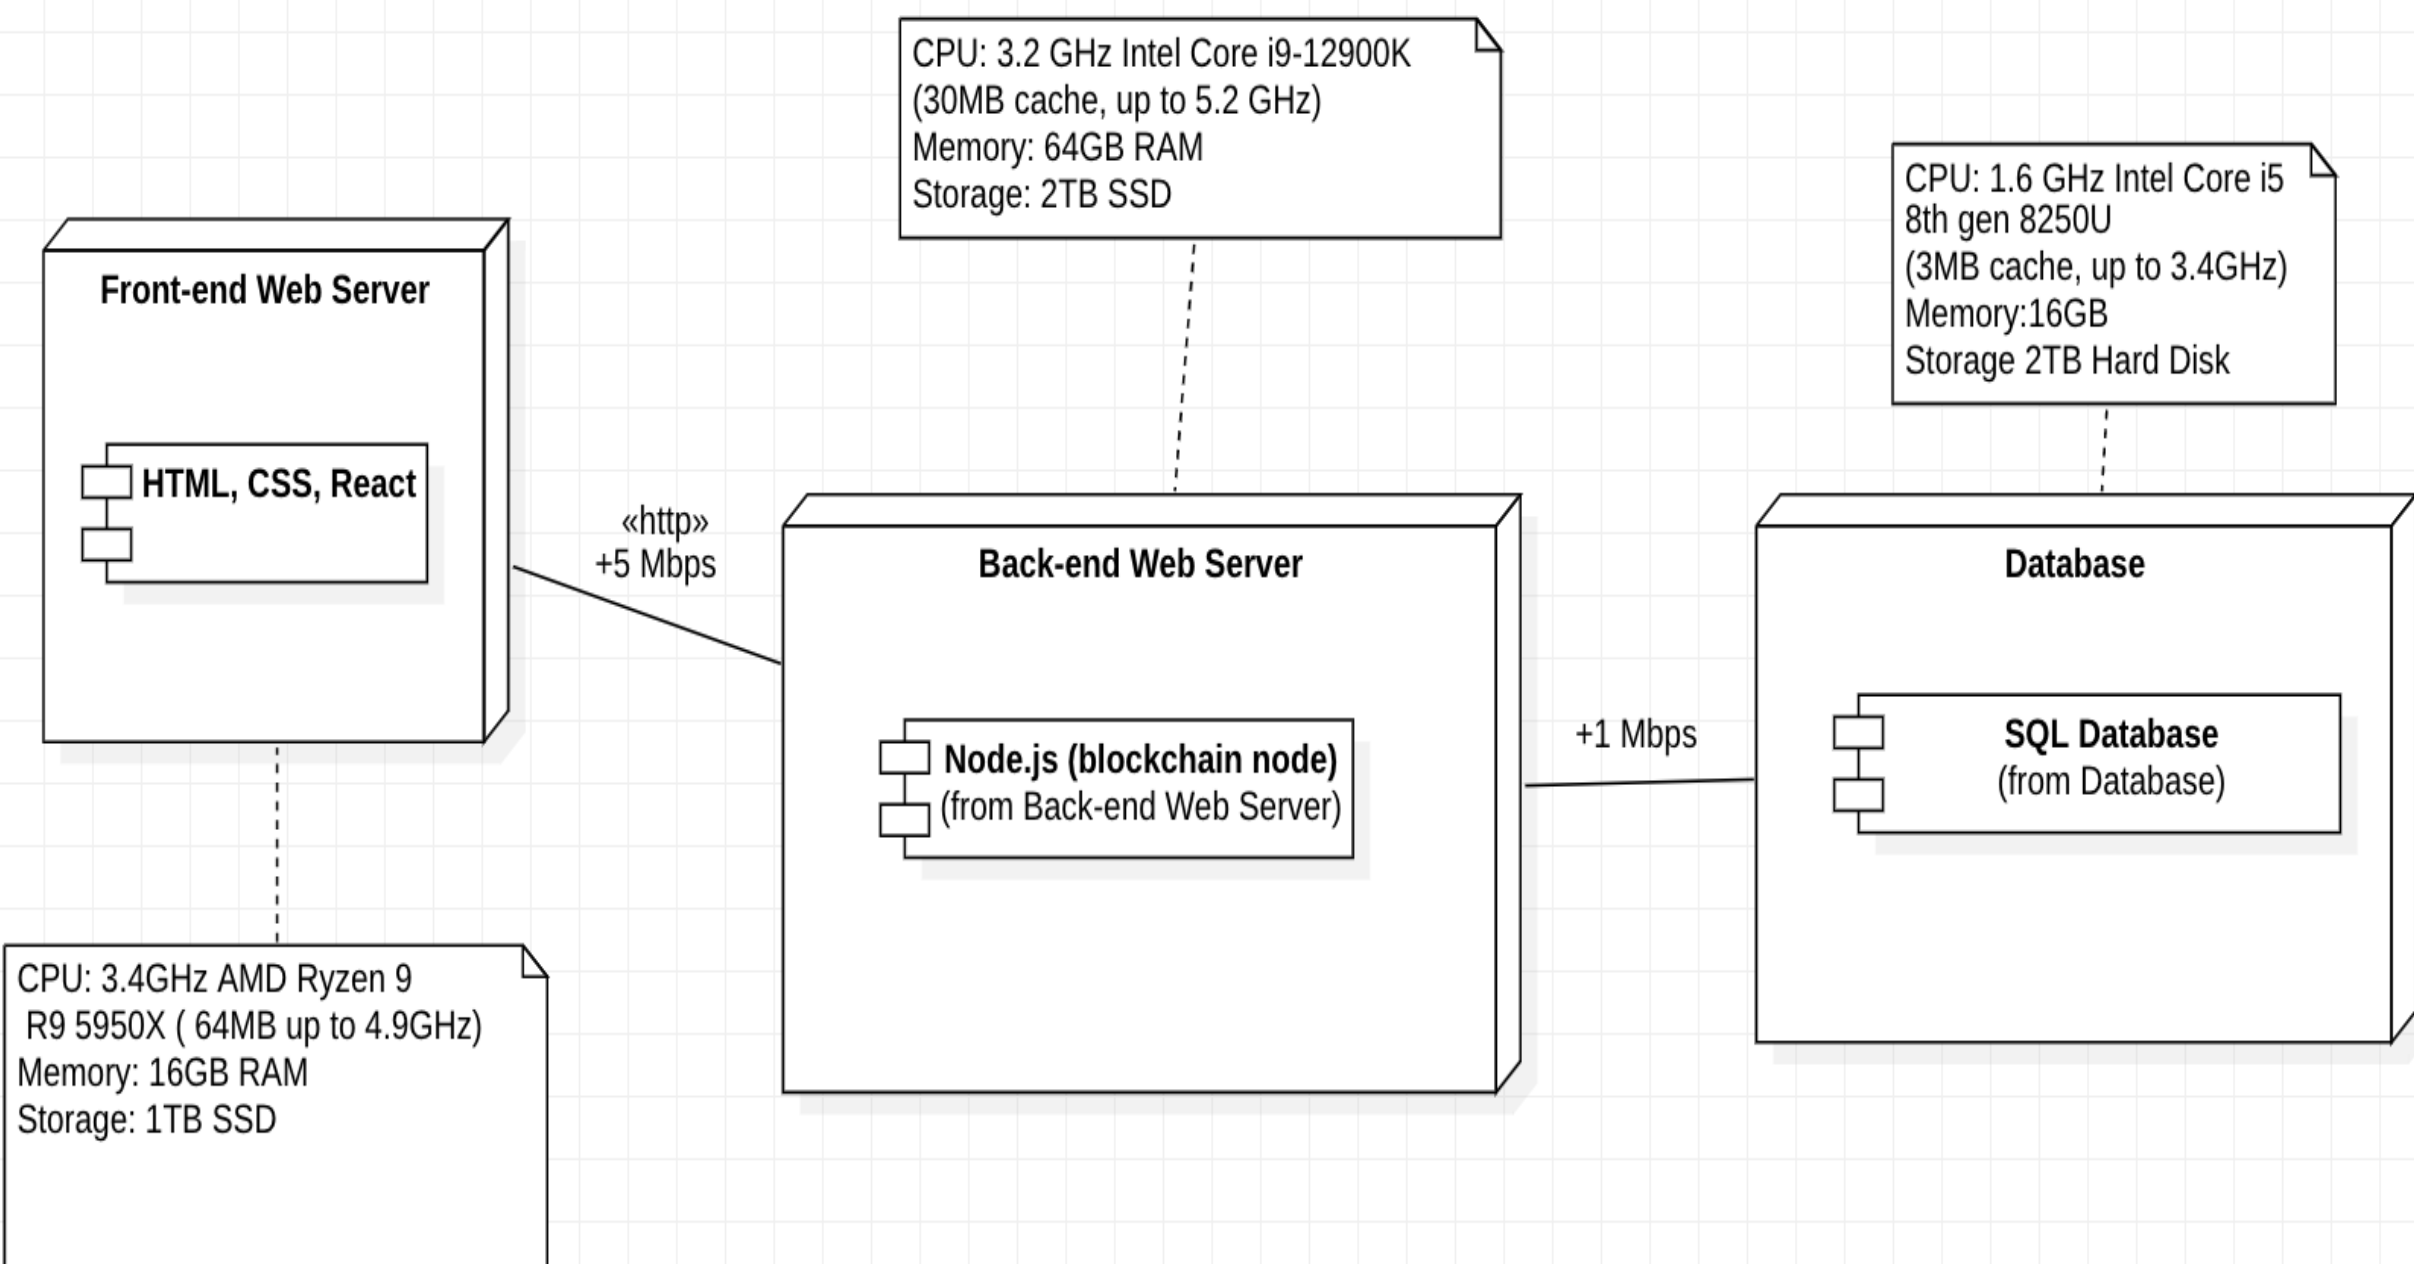

System Design

Object Design

Implementation

Summary

Although, the project isn't completed the vision is still there for the next team. If you want to do a project that'll allow the students to make decision data or allow students to being more democratic with there decision making do this project.
