

Spring 2023 Capstone 2 Project

University Social App

Student: Rogelio Lopez

Instructor/Facility: Dr. Masoud Sadjadi

Problem

The main issue being, how do we allow university students interact with one another with easy and comfortability, with like minded individuals. The solution was to create a social media app specifically for said university students

All User Stories Planned out in Sprint 1:
Feed Page (Individual Task)

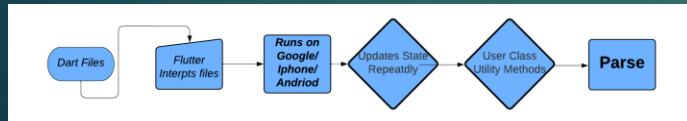

- Create feed page for users to be able to see other users
- Like and Dislike users profiles
- Pull information from the database to fill in the user data

The University Social app is entirely created using Flutter and development throughout the process was continuously tested using Android Studio and Xcode.

Furthermore, the development process all took place through GitHub providing valuable collaborative learning experiences using the software.

Verification

Summary

The app is currently in development and ultimately not all user stories were completely in the time estimated, The app aims to provide a platform for users to connect with new people and share their thoughts, ideas, and experiences. To verify the project ideally, the team would plan to use a combination of methods, including feedback from peers, testing tools, user testing, and consulting with their advisor. There was a lot progress accomplished after the tasks were split into separate teammates. There is a lot potential and work within this app for the FIU community.
