

PROBLEM

Our senior population is increasing more quickly than it ever has, and this trend is expected to continue. Therefore, society will be impacted on many. We will need an "integrated individual-centered approach" that help them and their caregivers to ensure their wellbeing.

GOAL

The main goal of this project is to create an application that can be used by both senior individuals and those who provide care, and that can be interacted with via a variety of devices. In the iCare app for Baby Boomers, older people can keep track of their health and well-being. Caregivers and senior users will be able to view the data collected by the application and use it to promote good health for the senior users.

IMPLEMENTATIONS

- App must be easy to use for elderly people.
- Make all parts of the interface in a visually, harmonious and coherent design.
- Ability to use the application on different platforms (Android, IOS, and web version).
- Adding social features to the app.
- Maintain high security for personal information.
- Providing help in accidents.
- Insuring users' privacy.

PROCESS DIAGRAM

DEPLOYMENT DIAGRAM

CONTRIBUTIONS

- User's Ability to Update Email
- Email Validator
- Email Updating on Firebase Documentation
- Profile User Interface Changes
- User's ability to see their Email and Phone Number

- Gradient Integration
- Medication's Page
- Developed the UI for the Medication's page & Medication Form
- Accessibility for the Dashboard Menu
- Incorporated the gradient in the Menu + Darken Text
- Delete Account Button
- Gave user's the ability to delete their account & confirm the deletion

ACKNOWLEDGEMENT

The material presented in this poster is based upon the work supported by Max Arefi. I thank Dr. Masoud Sadjadi for his assistance and mentorship that I received throughout the senior design project.
