

jTLEX Sprint 2 Retrospective Meeting

Ismael Clark, Jared Hummer, Luis Robaina, Antonela Radas, Ronald Pena, Leandro Estevez, Victoria Fernandez, Pedro Diaz, Emmanuel Garcia

What went well?

1. Team agreed in a JSON format for the API output which is important to move forward.
2. Documentation is nearly complete. Many of the issues were just typos, while others could simply be copied from the TimeML Annotation Guide.
3. We decided on which back-end technology to use. We implemented a POC of what the backend process would look like.
4. The team has a basic knowledge of the front-end technology to be used.

What didn't go well?

1. Lack of documentation in previous semesters means that the workings of some functions have been lost and need to be inferred.

How can we improve?

1. Making sure to document as we code will make it easier for current sub-groups and future groups to understand what has been written.
