

User Manual

Get Started:

If using SVN, first open the Eclipse IDE and connect it to the SVN repo, once Connected Pull the Files needed for the project. For easier pulling of the Files, pull the whole project.

If using the files sent by the student, save it anywhere in your computer and go to eclipse and import the files in to the eclipse environment.

What's next?

Once the project is Pulled from the SVN, make sure the JSON files were pulled correctly, and go to the file called JsonParserTest.java which is on the ANAnSI directory, and right click the code and run it as a Junit test, or Go to the bar on the top left and click the play button (first make sure the play button has the run as Junit option).

OUTPUT

After following the what's next step, an output should have been displaying showing what the code is doing after the output is displayed you officially ran the code and are done.
