

BBQUDA Installation Guide

Software requirements to run BBQUDA

- Python 3.8 or above
- Git
- Web browser (preferably Google Chrome)

Installation

- Clone Project:

Start a bash session and execute:

git clone https://github.com/cange017/bbquda_web.git

- Virtual Environment:

Virtualenv is a tool for creating virtual python environments. Execute the command: *pip install virtualenv*

Navigate to the bbquda_web folder and execute:

virtualenv env

cd env

source bin/activate

cd ..

- Requirements:

Execute: *pip install -r requirements.txt*

- Run Server:

Execute:

python3 manage.py migrate

python3 manage.py runserver

A link to a local server will be provided in the terminal and can then be copied into the web browser.
