

## **Sprint Retrospective Meeting Minutes**

Attendees: James Davidovich, Giancarlo Perez, Ricardo Estrella, Moiz Khatri, Max Garcia

Start time: 7:00 PM

End time: 7:15 PM

What went wrong?

- Did we do a good job estimating our team's velocity?
  - We believe we overall did a good job at estimating our team's velocity.
- Did we do a good job estimating the points (time required) for each user story?
  - We did not do the best job at estimating the time required for each user story. We had given enough time for researching how to start programming our user stories. However, we did not account for the time that it would take to debug how changing some elements would destroy the forming.
- Did each team member work as scheduled?
  - Each team member worked as scheduled.

What went right?

- Many things went right. Every team member was quick to clear up some small confusions when they would arise. The team's organization was good as everyone was always able to make it to each meeting on time. Team members shared resources among each other that were perceived to be helpful to the entire group.

How to address the issues in the next sprint?

- How to improve the process?
  - One thing we could do to improve the process is spend more time coding together. This way, we could bounce ideas off of each other on how to debug our code faster. This will help since if the same issue is encountered again by another member more members will know how to resolve the issue.
- How to improve the product?
  - Ways to improve the product would be to communicate more with the PO to make sure everything being implemented falls in line with PO's vision. Another way to improve the product is by having someone trying to test the limits of the program and seeing if and where applications start to break down.
