

Wishlist / Shortcomings

- Add in the ability to filter sessions by the application used
- Use the handicap set in the sensor control to apply when calculating the scores in the competitive applications
- Allow for more themes from the user
- Move the sounds from separate files into the resources file so they are compiled together
- Adjust the User Interface to better make room for the visual feedback
- Allow for the application to connect to the heavy bag to get real data
- Change the way time is calculated on the Combo Score page to be more accurate
- Allow the user to set defaults for time and force goals in the different applications
- Extend the Visual Feedback to support vertical configurations
- Remove the need to explicitly call FinishSetup() in the visual feedback control
- Fix a bug where the timeIntervalLabelTable disappears in the ComboScore page
