

Files Related to Stripe Configuration

This page is to help explain specific files related to Stripe functionality within the EForT website.

File Name	What it does
EForT/appsettings.json	Contains the owner/company's Stripe and Plaid keys/tokens that will be used to link the owner's Stripe and Plaid accounts to the site.
EForT/Startup.cs	Creates an instance of the StripeService.cs as a new service in EForT. Uses appsettings.json to get tokens to add to the StripeConfigurationModel.cs and the PlaidConfigurationModel.cs files. Adds these configuration settings to the StripeService in order to link the Stripe and Plaid accounts.
EForT/Models/StripeServiceConfigurationModel.cs	Holds all configuration information about Stripe such as APIKey, StripeSecretKey, StripePublishableKey, StripeOAuthToken, ProductionMode, and StripeClientId. Can be used within the AccountsController in order to use this information to link bank accounts and credit cards.
EForT/Models/PlaidConfigurationModel.cs	Holds all configuration information about Plaid such as PlaidEndpoint, PlaidClientId, PlaidPublicKey, and PlaidSecret.
EForT/Models/PlaidCallback.cs	A model for holding client information when linking Plaid bank accounts.
