

Sprint 1 Retrospective Meeting Minutes

Sprint 1 Retrospective Meeting Minutes

Attendees: Nicolas Gonzalez, Emmanuel Perez

Start time: 9:15pm

End time: 9:35pm

What went wrong?

- Did we do a good job estimating our team's velocity? No we did not, We tried being conservative about our estimates but even then we underestimated the time it would take us.
- Did we do a good job estimating the points (time required) for each user story? No, at least for the first primary user story for setting up the server-client environment, which did not let us work on the other user stories.
- Did each team member work as scheduled? Because of a miss understanding about when the sprint started we ended up ramping up a bit late. This put us behind and we struggled to recover. Our busy work and class schedule has not helped either.

What went right?

- Communication was good, everyone was timely about replying and making meetings.

How to address the issues in the next sprint?

- How to improve the process? We need to devote some more time to catch up and to get past the hump of starting. We also need to improve our estimating of time required. Also we need to get past the major stories that are bottle necking our work.
- How to improve the product? Lets create a product first, this is only version 1.0. This means starting the setup environment before working on the product.
