WHAT YOU WILL SEE

Graduating Computer Science, Cybersecurity, Information Technology, and Data Science & AI teams present working products — live demos, posters, and videos — built for real product owners from companies like JPMorgan Chase, Beckman Coulter, Assurant, and South Florida startups. Every team runs professional Scrum: sprint boards, daily standups, and sprint-by-sprint records, all visible on the Capstone site.

WHY IT MATTERS NOW

This is the **AI-Powered Capstone**: every student works with professional AI development tools, so a team of three to five seniors now ships in one semester what once took several. Ambitious projects continue across semesters with structured hand-offs from team to team — a product that keeps compounding.

WAYS TO TAKE PART

- **Attend** — watch the presentations from anywhere; it is free and open.
- **Judge** — evaluate a handful of teams in one afternoon and receive an official FIU Certificate of Service.
- **Propose & sponsor** — bring a project idea for Fall 2026 or sponsor a team's AI tooling.
